

PUBLIC-SOURCE DEMO BUSINESS PLAN

Emovo Care

Wearable hand robotics for rehabilitation and assisted movement

PUBLIC COMPANY FACT	PUBLIC COMPANY FACT	PUBLIC COMPANY FACT
CE-marked	Revenue generating	Second batch sold
EU MDR device	Venturelab profile	May 2026 milestone

READ THIS FIRST

This document was compiled by Proofline from public sources for a product demonstration. It is not a confidential company business plan, was not authored or approved by Emovo Care, and is not an offering document, investment recommendation, commitment, or promise of funding. Verified public facts are separated from Proofline interpretations and unverified planning assumptions.

Evidence cut-off: 19 July 2026
Manifest: PROOFLINE-PUBLIC-DEMO-EMOVO-2026-07-19-V1
Prepared by Proofline v3

1 / EXECUTIVE CASE

The opportunity in one page

A compact, citation-led view of what is publicly supported, what remains unknown, and why the company is useful for a deterministic Proofline demo.

INVESTMENT CASE

Emovo Care is a Swiss medical-robotics company commercializing a motorized hand orthosis. Its current product page describes Emovo Clinic as commercially available and CE-marked under EU MDR. A Venturelab profile reports revenue generation and dated first- and second-batch sales. Independent EPFL reporting describes hospital and rehabilitation-center testing. [S1, S3, S4]

WHY NOW

The public-health backdrop is material: WHO estimates 2.4 billion people may benefit from rehabilitation and documents access constraints including workforce shortages and long waits. NHS England explicitly prioritizes improved post-hospital stroke rehabilitation. These sources establish problem pull, not automatic product adoption. [S7, S8, S9]

COMMERCIAL SIGNAL

Public evidence has advanced beyond grant-only validation: Venturelab lists a five-figure sale in 2021, CE marking in October 2025, first batch sales in December 2025, and second batch sales in May 2026. Exact revenue, price, margin, recurrence, customer count, and concentration remain undisclosed. [S3]

Proofline screen

The packaged demo snapshot covers founder execution, market pull, product and technical fit, and three of four commercial criteria. Unit economics remains deliberately unknown. Under the configured fixed-check policy, the reviewed snapshot is policy-eligible for a USD 100,000 human review. That status is non-binding and does not reserve capital.

PUBLIC-EVIDENCE COVERAGE

Founder execution evidence

covered; reviewed public milestones

**Market / problem pull**

covered; health-system sources

**Product / technical fit**

covered; certification + research

**Revenue plausibility**

unit economics remains unknown

The values above are the deterministic Proofline evidence scores for this frozen snapshot, not success probabilities, valuations, or founder-worth ratings.

2 / COMPANY AND TEAM

Public company profile

Only facts traceable to the cited company, ecosystem, university, or public-institution sources are presented as verified public facts.

FIELD	PUBLIC-SOURCE FACT
Legal entity	Emovo Care SA; company identifier CHE-373.504.143. [S1]
Incorporation	12 June 2020, as reported by Venturelab. [S3]
Location	Biopole, Epalinges, Vaud, Switzerland. [S1]
Founders	Luca Randazzo, co-founder and CEO; Iselin Froybu, co-founder and COO. [S2]
Current product	Emovo Clinic, a motorized hand orthosis for active hand opening and closing. [S1]
Regulatory status	CE-marked medical device under EU MDR, according to the company. [S1]
Commercial status	Commercially available today, according to the company; Venturelab says the company is generating revenues. [S1, S3]
Research product line	Active hand exoskeletons with one to five degrees of freedom, sensors, and software APIs; explicitly marked research-use only and non-certified. [S1]

EXECUTION TIMELINE

FIELD	PUBLIC-SOURCE FACT
2017	First patent submission listed in Venturelab's milestone ledger. [S3]
2019-2020	Venture Kick program and CHF 150,000 award; more than 150 stakeholder interviews and tests reported. [S5]
2020	Company incorporated. [S3]
2021	ISO 13485 certification and a five-figure sale listed by Venturelab. [S3]
2022-2023	EPFL describes hospital testing; FIT provides a CHF 100,000 Tech Seed loan for market validation and proof-of-concept sales streams. [S4, S6]
2025	CE mark and first batch sales listed in October and December. [S3]
2026	Second batch sales listed in May; current product page says commercially available. [S1, S3]

Founder-scoring boundary

Proofline uses only observable, attributable execution evidence. It excludes protected traits, school or employer prestige, followers, popularity, and inferred personal characteristics. The team timeline is evidence of delivery and regulated-hardware execution, not a measure of personal worth.

3 / PROBLEM AND CUSTOMER

Rehabilitation access meets hand-function need

The problem case combines condition-specific public reporting with independent health-system and global-health sources.

PROBLEM

Loss of grasping function after stroke or injury can make everyday activities difficult. EPFL reported in 2022 that nearly 12 million people worldwide survive a stroke each year and roughly half retain some limitation in hand use. It also described many portable robotic systems as too complex or expensive for daily use. [S4]

SYSTEM CONSTRAINT

WHO estimates 2.4 billion people live with a condition that may benefit from rehabilitation. It describes unmet need, long waiting times, shortages of trained professionals, funding gaps, and limited access to assistive technology. WHO's rehabilitation workforce initiative separately calls the global rehabilitation workforce shortage a large unmet need. [S7, S8]

BUYER CONTEXT

Potential institutional users include clinics, rehabilitation centers, hospitals, and research institutions. NHS England's stroke program seeks improved post-hospital rehabilitation models and broader recovery reviews, providing a real incumbent need signal. A need signal is not a purchase order, budget allocation, or customer commitment. [S4, S9]

USER / BUYER	JOB TO BE DONE	PUBLIC EVIDENCE
Clinician or rehabilitation team	Extend active hand movement practice across clinical and domestic settings.	Company use cases; EPFL hospital testing. [S1, S4]
Research institution	Use configurable exoskeleton hardware, sensors, and APIs for neurorehabilitation research.	Emovo Research product description. [S1]
Person using rehabilitation	Perform meaningful grasp and release activities with a portable system.	Company product features; EPFL description. [S1, S4]
Health system	Improve reach and continuity of post-hospital rehabilitation under capacity constraints.	WHO access constraints; NHS priorities. [S7-S9]

Market-sizing caution

Prevalence and unmet need are not revenue. A defensible market model still requires reachable account counts, price, reimbursement, purchasing authority, replacement cycles, utilization, and adoption assumptions.

4 / PRODUCT AND EVIDENCE

A portable, regulated hand-robotics platform

The product case separates current certified use, research-only configurations, and adjacent peer-reviewed research.

FIELD	PUBLIC-SOURCE FACT
Function	Active hand opening and closing with a motorized orthosis. [S1]
Use settings	Clinical and domestic settings; one device can serve multiple patients. [S1]
Fit and control	Adaptable to different hand morphologies and left or right hands; controlled through soft push-buttons. [S1]
Modularity	Can be combined with off-the-shelf splints for different scenarios. [S1]
Architecture	Venture Kick described patent-protected artificial tendons and lightweight, wearable, modular components. [S5]
Independent development evidence	EPFL reported multiple rounds of testing and successful tests in hospitals and rehabilitation centers. [S4]
Certification	Company describes Emovo Clinic as CE-marked under EU MDR. [S1]
Research line boundary	One-to-five degree-of-freedom exoskeleton variants with sensors and software APIs are explicitly non-certified and for research use only. [S1]

ACADEMIC AND TECHNICAL ALIGNMENT

A 2020 pilot study in the Journal of NeuroEngineering and Rehabilitation evaluated a self-administered home program using a soft robotic hand glove for people with chronic spinal-cord injury and reported improvement in hand function. A 2025 randomized study reported that combined conventional and robotic hand rehabilitation improved multiple post-stroke outcomes more than either protocol alone. [S10, S11]

What this research does and does not establish

The studies support mechanism and delivery-setting alignment. They do not establish the clinical efficacy, comparative effectiveness, safety, reimbursement, or adoption of Emovo Clinic. Product-specific evidence must be reviewed separately.

DEFENSIBILITY QUESTIONS FOR FULL DILIGENCE

- Obtain CE certificate, intended-use statement, risk class, notified-body details, and post-market surveillance plan.
- Review patent families and claim scope, including freedom-to-operate against hand-orthosis competitors.
- Request product-specific clinical, usability, safety, and durability datasets with protocols and adverse events.
- Verify manufacturing process capability, quality-system audit status, supplier concentration, and service requirements.

5 / COMMERCIAL PLAN

A real sales signal, with material economics still unknown

This section distinguishes public commercial evidence from Proofline's planning hypotheses for a future data room.

PUBLICLY SUPPORTED

FIELD	PUBLIC-SOURCE FACT
Availability	Emovo Clinic is commercially available today, according to the company. [S1]
Revenue	Venturelab states that Emovo Care is generating revenues. [S3]
Historic sale	Venturelab lists a five-figure sale in April 2021. [S3]
Batch sales	First batch sales in December 2025 and second batch sales in May 2026 are listed as milestones. [S3]
Customer path	The company invites product inquiries; EPFL reported plans to provide devices to clinics and research institutions. [S1, S4]
Non-dilutive support	CHF 150,000 from Venture Kick in 2020 and a CHF 100,000 FIT Tech Seed loan in 2023. [S5, S6]

PROOFLINE PLANNING HYPOTHESES - NOT COMPANY GUIDANCE

HYPOTHESIS	WHY IT IS PLAUSIBLE	EVIDENCE REQUIRED
Direct clinical sales remain the initial motion.	Current direct inquiry and clinic use case. [S1]	Pipeline by stage, sales-cycle distribution, conversion, procurement owners.
Research systems can create an earlier, lower-regulatory-friction segment.	Separate research product line with sensors and APIs. [S1]	Research-unit sales, pricing, gross margin, support load, renewal or upgrade behavior.
Domestic use may expand utilization per device.	Product is described for clinical and domestic settings. [S1]	Training burden, adherence, safety, reimbursement, remote monitoring, logistics.
Institutional distribution partners could accelerate geography expansion.	Common medtech route, but no public partner is identified.	Signed partner terms, margin stack, exclusivity, minimum orders, territory coverage.

No fabricated forecast

Public sources do not disclose product price, revenue amount, gross margin, bill of materials, customer acquisition cost, lifetime value, sales cycle, backlog, churn, or valuation. This demo therefore does not invent a revenue forecast or valuation. Those fields remain explicit diligence requests.

6 / RISK, DILIGENCE, AND MILESTONES

What must be true for the case to compound

A high-quality screen exposes unresolved risks rather than hiding them inside a single score.

RISK	CURRENT PUBLIC VIEW	PROOF REQUEST
Clinical and regulatory	CE-marking is publicly stated, but certificate scope, intended use, post-market data, and product-specific outcomes require primary review.	Certificate, clinical evaluation report, PMS/PMCF, vigilance history.
Commercial	Revenue and batch sales are reported, but scale, recurrence, customer concentration, and pipeline are unknown.	Invoices, bank evidence, customer list, cohort revenue, backlog, pipeline.
Unit economics	No public price, gross margin, manufacturing yield, warranty reserve, or service cost is available.	BOM, labor routing, COGS bridge, gross-margin history, service and return data.
Manufacturing	Regulated hardware introduces supplier, quality, calibration, cleaning, and repair risks.	Approved supplier list, capacity model, yield, incoming QC, CAPA and audit history.
IP and competition	Artificial-tendon patents are reported, but claims and freedom-to-operate have not been assessed here.	Patent schedule, prosecution status, FTO opinion, competitor claim chart.
Adoption	Hospital tests and public need do not guarantee procurement, training, adherence, reimbursement, or repeat use.	Reference calls, utilization, NPS, training time, procurement and reimbursement evidence.

PROPOSED 12-MONTH DILIGENCE MILESTONES - PROOFLINE HYPOTHESES

- Verify primary regulatory, quality, patent, sales, and financial records before any investment decision.
- Establish product-specific clinical and real-world evidence plan with pre-specified outcomes and adverse-event reporting.
- Demonstrate repeatable manufacturing batches with documented yield, gross margin, service burden, and on-time delivery.
- Show a stage-defined institutional pipeline with referenceable users, conversion data, and repeat or expansion orders.
- Define the research-system and certified-device portfolio boundaries, pricing architecture, and channel strategy.

Decision status

POLICY-ELIGIBLE FOR HUMAN REVIEW under Proofline's frozen fixed-check demo policy. This is not APPROVED, COMMITTED, GUARANTEED, or INVESTED. No funds are reserved and no transfer is authorized.

7 / SOURCES AND DEMO INSTRUCTIONS

Traceable evidence register

URLs are printed in full so the uploaded plan remains independently auditable outside Proofline.

DEMO UPLOAD

- In Proofline Live research, choose Analyze a startup and upload this exact PDF.
- Use company name 'Emovo Care' and founder names 'Luca Randazzo, Iselin Froybu'.

- Optionally enable Exa to cross-check the current live query plan. Exa and Tavily results remain unreviewed until attested.
- Proofline recognizes only the exact packaged file digest and then explicitly loads its separate frozen reviewed source pack. The PDF itself remains self-reported evidence.

EXPECTED FROZEN DEMO OUTPUT

FIELD	PUBLIC-SOURCE FACT
Opportunity score	62.1 / 100. A bounded evidence-and-coverage-adjusted assessment, not a success probability.
Evidence coverage	85.1%. Unit economics remain explicitly missing.
Uncertainty	+/- 18 points (medium). The displayed score band is 44.1 to 80.1.
Strongest dimension	Product / technical fit: 69.2.
Fixed-check policy	USD 100,000 - POLICY-ELIGIBLE FOR HUMAN REVIEW.
Capital status	Non-binding. Not approved, committed, guaranteed, or invested; no funds are reserved.

Final boundary

A deterministic product demo is possible because the cited source snapshot and policy are frozen. A current live-web result, future company performance, return, or real investment outcome cannot be guaranteed.
